

Aerial Lift Training Guelph

Aerial Lift Training Guelph - An aerial work platform is a mechanized access platform. This machinery provides access to otherwise not accessible places for equipment or people. Also called an elevating work platform or aerial device, the machine is usually used to be able to access high areas. Maintenance and construction workers often must make use of aerial work platforms on the job. They are utilized by firefighters for emergency access.

Meant for temporary application, aerial work platforms are different from elevators, that provide permanent access to high places. An aerial work platform is intended to be operated by a single individual, and could lift weights of less than one ton. Several kinds have load limits which are higher. There are different types of aerial work platforms; like for example, there is a "cherry picker" and a "scissor lift".

A lot of the aerial work platforms are outfitted together with electrical outlets or compressed air connectors for power tools. For specialist jobs, such as lifting frames for window glass, an aerial work platform could come with special tools.

Anybody required to operate an aerial lifting device needs training, together with their superiors. Members of Health & Safety Committees and representatives responsible for inspecting aerial device work areas also need to undergo training. Individuals training would learn aerial lifting device operation. They would also know the rules that apply to safely utilizing these devices. Rules differ from province to province, and in worksites which are federally regulated.

Employees who are required to be lifted or work near an aerial lifting device needs to be aware of all the possible dangers. In a general safety session, an Aerial Lift Training Video can be shown to educate all of the workers who are lifted by them or work near them.

Most Aerial Lift Training Program would comprise modules that are focused on the following areas: hazard Identification; Aerial Lift Devices and Operating Controls; Platform Positioning & Park Positioning and Pre Operational Checks for Aerial Lift Devices. The program is designed to train staff on the safe use of self-propelled, elevated work platforms and self-propelled, boom supported, elevated work platforms. A certificate would be given to employees who complete the program, signed by a person qualified to be able to verify the successful completion of a hands-on practical exam.
